Q: What could the instructor do to make this course better?

1   When I was choosing this course, I asked several seniors about this course, and many people suggested that I take it because the content of this course is very important. However, the content of this teacher's class is completely copied from the book "Designing Data-Intensive Application". The content on the slides is exactly the same. I don't think it makes any sense to listen to him read the book again. This is supposed to be a very practical course, not just about memorizing a bunch of concepts. What's more, at the end of the semester, the teacher asked us to do a distributed system project. He didn't teach anything related to code throughout the semester. Many of us are now very shocked. I'm surprised that such an instructor is teaching in our university.

Q: What I could have done to make this course better for myself.

1   We need to learn a lot by ourselves, and the content of this course is of little significance.
